

SFC2021 INTERREG Programme

CCI	2021TC16IPCB006
Title	(Interreg VI-A) IPA Bulgaria North Macedonia
Version	1.2
First year	2021
Last year	2027
Eligible from	1 Jan 2021
Eligible until	31 Dec 2029
EC decision number	C(2022)8880
EC decision date	29 Nov 2022
NUTS regions covered by the programme	BG413 - Благоевград BG415 - Кюстендил MK004 - Југоисточен MK007 - Североисточен MK002 - Источен
Strand	Strand A: CB Cross-Border Cooperation Programme (ETC, IPA III CBC, NDICI-CBC)

Table of Contents

1. Joint programme strategy: main development challenges and policy responses	4
1.1. Programme area (not required for Interreg C programmes).....	4
1.2 Joint programme strategy: Summary of main joint challenges, taking into account economic, social and territorial disparities as well as inequalities, joint investment needs and complimentary and synergies with other funding programmes and instruments, lessons-learnt from past experience and macro-regional strategies and sea-basin strategies where the programme area as a whole or partially is covered by one or more strategies.	5
1.3. Justification for the selection of policy objectives and the Interreg-specific objectives, corresponding priorities, specific objectives and the forms of support, addressing, where appropriate, missing links in cross-border infrastructure	17
Table 1	17
2. Priorities.....	21
2.1. Priority: 1 - Priority1 : Greener border region.....	21
2.1.1. Specific objective: RSO2.7. Enhancing protection and preservation of nature, biodiversity and green infrastructure, including in urban areas, and reducing all forms of pollution	21
2.1.1.1 Related types of action, and their expected contribution to those specific objectives and to macro-regional strategies and sea-basin strategies, where appropriate	21
2.1.1.1b. Definition of a single beneficiary or a limited list of beneficiaries and the granting procedure	24
2.1.1.2. Indicators	25
Table 2 - Output indicators.....	25
Table 3 - Result indicators.....	26
2.1.1.3. Main target groups.....	27
2.1.1.4. Indication of the specific territories targeted, including the planned use of ITI, CLLD or other territorial tools	28
2.1.1.5. Planned use of financial instruments	29
2.1.1.6. Indicative breakdown of the EU programme resources by type of intervention.....	30
Table 4 - Dimension 1 – intervention field.....	30
Table 5 - Dimension 2 – form of financing	31
Table 6 - Dimension 3 – territorial delivery mechanism and territorial focus	32
2.1. Priority: 2 - Priority 2: More connected border region.....	33
2.1.1. Specific objective: RSO3.1. Developing a sustainable, climate resilient, intelligent, secure, sustainable and intermodal TEN-T.....	33
2.1.1.1 Related types of action, and their expected contribution to those specific objectives and to macro-regional strategies and sea-basin strategies, where appropriate	33
2.1.1.1b. Definition of a single beneficiary or a limited list of beneficiaries and the granting procedure	36
2.1.1.2. Indicators	37
Table 2 - Output indicators.....	37
Table 3 - Result indicators.....	38
2.1.1.3. Main target groups.....	39
2.1.1.4. Indication of the specific territories targeted, including the planned use of ITI, CLLD or other territorial tools	40
2.1.1.5. Planned use of financial instruments	41
2.1.1.6. Indicative breakdown of the EU programme resources by type of intervention.....	42

3.2. Total financial appropriations by fund and national co-financing	58
Table 8	58
4. Action taken to involve the relevant programme partners in the preparation of the Interreg programme and the role of those programme partners in the implementation, monitoring and evaluation	59
5. Approach to communication and visibility for the Interreg programme (objectives, target audiences, communication channels, including social media outreach, where appropriate, planned budget and relevant indicators for monitoring and evaluation)	62
6. Indication of support to small-scale projects, including small projects within small project funds	64
7. Implementing provisions	65
7.1. Programme authorities	65
Table 9	65
7.2. Procedure for setting up the joint secretariat	66
7.3. Apportionment of liabilities among participating Member States and where applicable, the third or partner countries and OCTs, in the event of financial corrections imposed by the managing authority or the Commission	67
8. Use of unit costs, lump sums, flat rates and financing not linked to costs	68
Table 10: Use of unit costs, lump sums, flat rates and financing not linked to costs	68
Appendix 1	69
A. Summary of the main elements	69
B. Details by type of operation	70
C. Calculation of the standard scale of unit costs, lump sums or flat rates	71
1. Source of data used to calculate the standard scale of unit costs, lump sums or flat rates (who produced, collected and recorded the data, where the data is stored, cut-off dates, validation, etc):	71
2. Please specify why the proposed method and calculation based on Article 94(2) is relevant to the type of operation:	72
3. Please specify how the calculations were made, in particular including any assumptions made in terms of quality or quantities. Where relevant, statistical evidence and benchmarks should be used and, if requested, provided in a format that is usable by the Commission:	73
4. Please explain how you have ensured that only eligible expenditure was included in the calculation of the standard scale of unit cost, lump sum or flat rate:	74
5. Assessment of the audit authority or authorities of the calculation methodology and amounts and the arrangements to ensure the verification, quality, collection and storage of data:	75
Appendix 2	76
A. Summary of the main elements	76
B. Details by type of operation	77
Appendix 3: List of planned operations of strategic importance with a timetable - Article 22(3) CPR	78
DOCUMENTS	79

1. Joint programme strategy: main development challenges and policy responses

1.1. Programme area (not required for Interreg C programmes)

Reference: point (a) of Article 17(3), point (a) of Article 17(9)

The beneficiaries of this programme are Bulgaria and North Macedonia. The Programme area is located in South East Europe and covers 5 NUTS III (or equivalent) territorial units, namely: 2 districts from Bulgaria – Blagoevgrad and Kyustendil and 3 regions from North Macedonia – North-East, East and South-East.

The border is 165 km long with three operating border crossings (Zlatarevo-Novovo Selo, Stanke Lisichkovo-Delchevo and Gyueshevo-Deve Bair). The total programme area covers 18 087 km² – in Bulgaria representing 8,6% of the country territory while in North Macedonia it represents 33,8%.

The population of the programme area is 942 157 inhabitants. The population of the part of Bulgaria is 417 757 inhabitants (6,03% of the country population) while on the side of North Macedonia is 524 288 inhabitants (25,34 % of the country population).

The settlement structure of the area is characterized by presence of 5 medium-large cities: Blagoevgrad and Kyustendil from Bulgaria and Kumanovo, Stip and Strumica from North Macedonia.

More than half of the programme area is mountainous with forests occupying over 40% of the territory. The geographical structure of the programme area includes also numerous valleys with agricultural lands, which favour the development of tourism, agriculture and organic farming.

The programme area is rich in water resources: rivers, the biggest of which are Struma, Mesta, Bregalnica, Strumica, Pchinja, Kriva Reka; lakes, part of Doyran lake, Vodoca, Mantovo, Kalimanci, Berovo Lake, Gratche, Pishica, Knezevo and other numerous smaller lakes in the three border regions in North Macedonia; numerous lakes in Rila and Pirin mountains, of which the most popular are the Seven Rila lakes); groundwater (both springs and thermal waters).

The climate is diverse, from moderate-continental, transitional-continental and mountainous to Mediterranean along the river valleys and Doyran Lake. The cross border region of both sides is assessed as having rich cultural and natural heritage and a high level of environmental sensitivity in terms of climate change.

1.2 Joint programme strategy: Summary of main joint challenges, taking into account economic, social and territorial disparities as well as inequalities, joint investment needs and complimentary and synergies with other funding programmes and instruments, lessons-learned from past experience and macro-regional strategies and sea-basin strategies where the programme area as a whole or partially is covered by one or more strategies.

Reference: point (b) of Article 17(3), point (b) of Article 17(9)

1. ECONOMIC, SOCIAL AND TERRITORIAL DISPARITIES

Multifaceted factors collide and shape the specific context of the cross-border cooperation at EU external borders. It is impossible for one to shadow the dividing lines on the EU external borders whose particularities can be traced in every policy domain and institutional setting. One such factor is the lasting negative impact of the historically rooted detachment of the two neighbouring countries on the programme area, which continues to overwhelm the prosperity of the region.

Another factor is the divergent institutional governance structures in both countries, which often jeopardize attempts to joint and integrated actions and solutions. All these are only few of the preconditions that determine different strategic focus and implementation approaches in Interreg programs of external and internal borders.

While most EU internal programs provide support for solutions to global challenges, the IPA territories are still confronted with the need to catch up in their socio-economic development. Therefore, the main joint challenge of the programme area for 2021-2027 is to leave the group of lagging regions (as the European Regional Competitiveness Index shows) and take on more advanced course of development while still facing persistent risk of poverty and income inequalities issues urged by negative demographic change, underdeveloped cross-border regional value chains and entrepreneurship, low technological specialization, unattractive and uncompetitive business setting. When these economic pushbacks take place in a weak cross-border institutional context and in the absence of carbon-free practices, the prospects for territorial cohesion in line with EU objectives (Territorial Agenda 2030; Green Deal) are further challenged. The overall underperformance of the CBC area is addressed by PO5 measures who require integrated and multilevel governance responses in the tourism and industry domains who are the main driving forces behind the advanced course of territorial development.

The carried out Territorial Analysis for programming purposes and its updated version allows for structuring main findings into the following groups of policy areas, viewed from the perspectives of obstacles and driving forces for development:

1.1. Negative demographic change

The programme area is sparsely populated having population density below the national average of the corresponding country due and far from the EU-28 average. In overall, the programme area is characterised by a negative natural population change (both countries experienced population decline by more than 5% in a decade), negative net migration and high proportion of population aged 65 years and more (as compared to EU average).

1.2 Poverty and income inequalities

Low income levels and inequalities continue to drawback the economic development of the CBC area. Eurostat data[1] show that the cross--border territory falls within the groups of regions with the second highest rate of poverty risk and social exclusion. Nearly one quarter of the total population (Bulgaria – 32,8%, North Macedonia– 39,9%) and at least half of the unemployed (Bulgaria – 58,7%, North Macedonia – 41,7%) were viewed as being at risk of poverty in 2019. In two BG border districts poverty was reduced in 2020 compared to 2016: Blagoevgrad (-2.1 %); and Kyustendil (-1.2 %). In terms of income inequalities, latest data (EU-SILC) places Bulgaria on top of all Member states with the biggest income gap between the poorest and the richest (8 times bigger gap than the EU average of 5,2 times). The main factor increasing the risk of poverty is the lack of job prospects.

1.3 Disparities in educational and employment outcomes

The share of attained primary and secondary education level in the whole CBC area is slightly above or very close to the national average of the respective country. The drop out of school rates have been decreasing every year.

For 2020 the Eurostat ‘Early leavers from education and training (% of population aged 18-24)’ indicator reveals important disparities between both countries, as follows: 12,8% (Bulgaria), 5,7% (North Macedonia), 9,9% for EU28. Data show that Bulgaria does not meet the ET 2020 (Strategic framework for European cooperation in education and training) benchmark of 10% share of early leavers from education and training, while North Macedonia not only meet the ET 2020 target, but it also marks a remarkable improvement of this key determinant for economic prosperity (12,5% in 2014).

Both countries underperform in adult education with slight differences as for Bulgaria placing the country in a better off position. The participation rate in education and training (25-64 years) for 2020 (measured by Eurostat) ranks Bulgaria (1,6%) and North Macedonia (2,6%) at the bottom of the European classification (EC28: 11,3%).

Both countries face two main employment-related challenges. The first one is the low employment and high unemployment rates in North Macedonia (compared to Bulgaria and EU average), particularly the ones in the North-East region (37% employment and 32,4% unemployment rate in 2020, which are also below the CBC average amounting to 51,06% employment and 11,3 unemployment rates). These data indicate structural economic deficits. The second challenge is the need to struggle with the high rate of youth NEETs. The relative cumulative data for the period of 2013-2020 is 13,6% (EU28), 17,5% (Bulgaria) and 26,7% (North Macedonia). The lack of equal employment opportunities for youth in the CBC area gives rise to concerns that the regional structural economic deficits may further deepen by making a whole generation of young people excluded from the CBC labour market for years to come.

1.4 Inequalities in access to healthcare

The health challenges in cross-border region are mainly related to: (1) inequalities in the supply of health services across urban and rural areas; (2) the quality of health services, (3) shortages of medical professionals, (4) high relative share of individual health costs. The remoteness of some small municipalities from urban agglomerations from the point of view of medical assistance delivery (primary, specialist, hospital, urgent and emergency) remains a serious CBC challenge in healthcare.

1.5 Disparities in competitiveness and business environment

In the 2018-2019 edition of the Global Competitiveness Index (GCI), Bulgaria ranks 49th out of 141 countries analysed, advancing from 51st place in the previous edition, while North Macedonia is at 82nd globally, but it has also advanced with two places from the previous edition. The enterprise environment in both countries resembles a distinct dual structure. At one extreme there exist a few large modern capital-intensive, resource-based, import-dependent and assembly-oriented enterprises, while at the other extreme there are small and micro enterprises that use very simple and traditional technologies and serve a limited local market.

The Eurostat data on business demography[2] shows a steady growth, between 2014 and 2018, of active enterprises in Bulgaria operating in the programme area (Blagoevgrad and Kyustendil districts), while the National Statistics of North Macedonia shows opposite trend – a decline in the total number of active enterprises. Active enterprises in the service sector prevail in the programme area, followed by the number of enterprises in the industry and the construction. The business demography data exhibits more intensive economic activities that take place on the Bulgarian part of the programme area despite the better conditions for doing business in North Macedonia. The country takes 17th place out of 190 countries in the 2020 World Bank ‘Doing Business’ ranking, while Bulgaria is ranked 61st.

1.6 Weak digital and innovation adoption

Ever since DESI index[3] has been built, Bulgaria has been ranked last in every edition of the index in its all indicators – connectivity, digital skills, use of internet services, integration of digital technologies, digital public services. North Macedonia also scores low (2.4 out of 5) in the OECD Competitiveness Outlook (2021) with regards to digitalisation.

The European Innovation Scoreboard 2021 assesses Bulgaria and North Macedonia as emerging

innovator. In both countries there is a lack of innovation infrastructure and cooperation and coordination among academia, the private sector and the government. In terms of entrepreneurship, the performance of North Macedonia is below the EU average, with the exclusion of entrepreneurial intentions who are more than 10% higher than the EU average. Opportunity-driven entrepreneurial activity in the country is the lowest compared to all EU and non-EU countries. Identical underperformance is observed in Bulgaria as well. The country performs far below the EU average in entrepreneurship, with the lowest score of all Member States.

Despite the underperformance of Bulgaria and North Macedonia in topical rankings, ICT Industry in both countries has been progressively developed over the last decade. The internet connection and usage are other important preconditions for implementing digital transformation policies and practices. Eurostat provides comparable information (2020 data) on the share of households with access to the internet and both countries reports similar scores - North Macedonia (79%) and Bulgaria (78,9%). Fixed broadband penetration remains limited in both countries which negatively impacts digital transformation and competitiveness. According to the 2021 Digital Government Factsheets[4] both countries perform below the EU average, yet indicating different degrees of digital improvements. North Macedonia is more advanced in the digitalization of health, while Bulgaria performs better in administrative servicing.

The share of knowledge-intensive sectors in the economy of both countries is lower than the EU average which correlates with lower R&D investments and productivity performance. Most jobs created by new firms emerged in less-productive sectors of the economy.

1.7 Underdeveloped year-round tourist infrastructure

The variety of natural and cultural assets in the programme area is a key precondition for defining target-oriented tourist offer. However, findings indicate a lack of cross-border competitive year-round tourist products and untapped tourism potential. Apart from the emphasized seasonality of the tourist offer, there is still no developed interaction of the tourist function across the border.

In overall, the CBC area represents invaluable potential for development of tourism and for preservation of rich biodiversity of national and pan-European importance. The CBC region is part of the diagonal road of the Cultural Corridor connecting Southeast Europe with Asia. In addition to these factors, it should be mentioned the diversity of historical periods and relevant cultural values. The CBC area does not enjoy positive trends in the enhancement of the tourism attractiveness of the region - the number of nights spent in the area is below the respective national average with the exception of Blagoevgrad district being home of two popular year-round tourism centres – Bansko (ski and mountainous resort) and Sandanski (spa centre). Despite the enabling factors and preconditions, tourism in the region "recognizes" insurmountable weaknesses: underdeveloped tourism product as a whole, underdeveloped network of companies for services and offers in tourism, insufficiently qualified staff in the field of tourism services, poor condition and limited access to natural and cultural-historical heritage sites. The COVID-19 impact on tourism raises additional challenges. Along with the need to develop tourism-driven local industries due to untapped tourism potential, parallel multilateral efforts and policy responses to rebuild the tourism linkages with local stakeholders, other economic sectors and natural resources and ecosystems should be strategically comprehended and practically addressed in an integrated and resilient manner

1.8 Lack of ecosystem-based practices and services to handle natural hazards and biodiversity loss

The link between biodiversity and the provision of ecosystem services has not yet been built in the programme area, despite the large amount of natural areas that enjoy various national and international protection statuses. The Territorial Analysis outlines the pollution of rivers, floods, landslides and fires as the biggest environmental problems of the border region. There are highly polluted river sections particularly within the catchment area of the Struma, and Bregalnica, Strumica and part of the Vardar River resulting mainly from the direct flow of waste waters from industry (and mine sites) and households, mine deposits and the use of pesticides and fertilizers in agriculture. Since the ecological infrastructure in the CBC area is generally assessed as underdeveloped, the absence of ecosystem-based practices and services to deal with various environmental challenges, weakens efforts for addressing climate change issues. The factors expected to adversely affect human health, environment, biodiversity, and economic growth include: (1) frequent floods, (2) powerful convective storms, which have caused serious material damage and casualties in a number of regions of Bulgaria, (3) severe droughts; (4)

landslides; (5) increasing frequency of forest fires due to insufficient afforestation, self-ignition of dry grass near forests, careless handling of fire, uncontrolled burning of household waste; (6) relatively high seismic hazard.

1.9 Limited preparedness for green transition

Both national economies are highly energy-intensive. Because of the dominant use of domestic lignite for electricity production, North Macedonia has a potential for greenhouse gas (GHG) emissions reductions. Solid waste disposal is by far the greatest contributor to the GHG emissions of the waste sector, which is also the highest growing category in terms of emissions along with very high transport-related GHG emissions amounting to 15% of country's total emissions. Since 2008, the country has made little progress in developing waste management infrastructure. The existing non-compliant municipal landfills do not meet even the basic conditions for safe waste disposal. Despite developments in the establishment of regional waste management systems and progress in the preparatory work, none of the regional landfills has been completed. Bulgaria remains the most energy-and greenhouse gas-intensive economy in the EU by a wide margin. The Country Report Bulgaria 2020 states that, in 2017, the country needed 3.8 times more energy and produced 4.4 times more carbon emissions per unit of GDP than the EU average. However, the country is still on track to achieve its targets for GHG emissions and renewable energy. It is not progressing, though, towards its energy efficiency indicative targets and the gap between the current and target levels of energy consumption is widening.

Although policy actions promoting green transition have been taken in Bulgaria, the country continues lagging behind the EU in all components of the circular economy[5]. The scale of resource productivity of North Macedonia also is far below the EU28's average. Both countries lack a circular economy strategy. North Macedonia does not even collect data on recycling and circular material use and that indicates these practices are insufficiently developed.

Other important targets of the EU Green Deal concern agricultural and food-processing practices. The GVA share of agriculture in the CBC are has been gradually shrinking over the last decade with the South-East and East regions of North Macedonia holding the largest shares. There are no reliable data on the use of chemical pesticides and antimicrobials, as well as on the scale of nutrient losses and the level of development of organic farming - all these components have green targets up to 2030. Corresponding indicators are not expected to exhibit significant contribution to the green targets, but there is a potential for encouraging sustainable and environmentally friendly production of safe and quality food and developing organic value chains which can have a greater impact in terms of biodiversity conservation and food security.

1.10 Limited cross-border connectivity and intraregional mobility

The lack of railway, high-speed road and/or highway connection between the two countries, the increasing cross-border traffic, the prospects of expanding the access to core TEN-T network result in insufficient border-crossing possibilities and hamper freight and passenger transport. There are only 3 operational border checkpoints along the border, servicing a population of about 1 million people. All these missing links and the untapped mobility potential in the scope of connectivity have urged the need to improve border and TEN-T access taking also into account the prospects of EU integration process.

One of the European cycling routes, namely the EuroVelo 13 Trail Iron Curtain Trail runs in the cross-border region. The EuroVelo routes have a tourist purpose, so they do not connect large cities, but they facilitate tourism mobility, which has an impact on the overall economic growth of the border region. None of the segments of the EuroVelo corridor passing through North Macedonia and Bulgaria, however, is developed or at least marked.

2. DRIVING FORCES

2.1 Favourable macroeconomic background and SME performance

The pandemic of COVID-19 has disrupted lives across all countries and communities and negatively affected global economic growth in 2020 beyond anything experienced in nearly a century. However, estimates indicate the outbreak reduced global economic growth in 2020 to an annualized rate of around -3.2%, with a recovery of 5.9% for 2021 and 4.9 % in 2022. Therefore, this section emphasizes on the macroeconomic stability and growth potential that both countries exhibited until COVID-19. In terms of

Bulgaria, GDP has hovered around 3% since 2016, with total factor productivity the main factor behind its expansion, alongside with growing export market share, increasing cost of labour per unit of output produced and continued integration in global value chains. Driven by strong exports and increased domestic demand, GDP of North Macedonia increased by 3.2% in 2019.

However, at the CBC level, some discrepancies in regional GDP shares for 2019, as % of the national GDP, shape the current economic outlook of the area: Blagoevgrad district (2,62%), Kyustendil district (0,93%), South- East region (8,92%), East region (8,17%), North-East region (5,03%). Due to the limited market size of North Macedonia, the GDP shares of its programme regions are higher than those of the Bulgarian regions.

In terms of GVA, the highest share of produced economic output is recorded in Blagoevgrad district in the service sector, followed by East and South-East Region of North Macedonia having been specialized in agriculture. Industry is the sector with the lowest cumulative share of GVA. In overall, the CBC regional specialization resembles low economic development and uncompetitive economic performance with limited opportunities for domestic companies to join global value chains. Bulgaria is among the biggest trading partners of North Macedonia, and that is a key enabling prerequisite for building regional value chains. According to data of the Customs Agency of Bulgaria, the freight traffic and movement of people between the two countries has been annually increased by an average of 10%.

2.2 Rich biodiversity with a strong impact on economic growth

The programme area enjoys a very rich and diverse natural heritage. Bulgaria ranks third EU country in the National Ecological Network (NEN) having covered 34.4% of its national territory under Natura 2000 network. The CBC area on the Bulgarian side abounds of natural parks and reserves that enjoy various forms of protection. A number of natural habitats, on the border side of North Macedonia, have been officially nominated as candidate Emerald Network sites. The National Emerald Network in North Macedonia includes 16 sites which represent about 80% of the whole network. Important ecological corridors of geomorphological, ornithological and botanical importance pass through the border side of North Macedonia. As of September 2021, Osogovski Mountains has been gained protection status covering an area of 48 829.26 hectares. Few more areas are on their way to become protected under the Emerald Network- these are Dolna Bregalnica and Maleshevo Mountains with the latter covering 11,460.89 hectares of protected areas. The programme area also belongs to the Balkan Green Belt which is the southernmost section of the European Green Belt.

Despite the various ecological protection that the programme area enjoys, there are areas in the region with loss, fragmentation and modification of habitats, reduced or destructed ecosystems. Basic reasons for that are: weak control systems, low level of education, lack of information, high vulnerability to natural and man-made hazards, lack of integrated planning and ecosystem-based practices and services etc. According to the Commission and the EU 2030 biodiversity strategy, development of green infrastructure (GI) is best example for ecosystem-based practices that contribute to resilient communities and result in multiple benefits for a given territory. These ancillary benefits include improved human health and wellbeing, enhanced environmental services and economic growth. GI aims at strengthening and restoring degraded ecosystems by strengthening integrated land management. As highlighted in the EU Green Infrastructure Strategy, investments in GI have significant potential to strengthen regional and urban development, including by maintaining or creating jobs. The rich biodiversity of the region is a base for development and diversification of different forms of tourism.

3. JOINT INVESTMENT NEEDS

- Investments for multidimensional integrated territorial measures addressing income gap, the relatively high poverty risk, social exclusion and inequalities through community-based services and integrated employment, improved access to and quality of general services for people and enterprises;
- Investments for development and implementation of attractive job prospects and comprehensive digital upskilling programmes, including measures of the silver economy;
- Investments for improving the quality, labour market relevance, and inclusiveness of education and training;
- Investments for technological modernization, adoption of circularity models, digitalization,

internationalization, entrepreneurship, accessing and setting up regional value chains, facilitating cross-border enterprise networking, etc.

- Investments for introduction and dissemination of the ‘tech-with-a-purpose’ approach who would leverage R&I to create the solutions that match the urgency of the cross-border environmental and social challenges;
- Investments for development of ecosystem-based approaches and greening solutions in handling environmental issues as well as for joint conservation and preservation techniques;
- Investments for integrated development of sustainable tourism practices;
- Investments in improving cross-border connectivity and mobility.

4. COMPLIMENTARITIES AND SYNERGIES WITH OTHER FUNDING PROGRAMMES AND INSTRUMENTS

This Interreg VI-A programme between Bulgaria and North Macedonia compliments other funding instruments and programmes as Interreg VI-A IPA Greece North Macedonia programme and Interreg VI-B IPA Adriatic-Ionian programme. Close coordination between the Managing Authority and the EU Delegation in North Macedonia will be maintained in order to maximise the effect of the assistance with other EU activities in the overlapping areas of support. The synergy and cumulative effect of this complementarity can be outlined per Interreg VI-A programme's priorities, as follows:

PRIORITY 1 GREENER BORDER REGION (green infrastructure)

Those topics are covered in *Environmental Programme* and *National Priority Framework for Action for Natura 2000* for programming period 2021-2027. In pursuant with Article 5(1) of Regulation (EU) 2021/1060 at least 60 % of the ERDF contribution of the programme is allocated to policy objective 2 "Greener border region" and two other policy objectives. The Territorial Analysis outlines the pollution of rivers, floods, landslides and fires as the biggest environmental problems of the border region. According to the EU 2030 biodiversity strategy, ecosystems and their services can be maintained and enhanced by establishing Green Infrastructure (GI) and restoring degraded ecosystems. In order to provide a lasting impact on the ecological infrastructure, the current Programme interacts with the *Environmental Programme 2021-2027* in fostering strengthening biodiversity, "green" infrastructure in the urban areas and reducing pollution. This decision also takes into account the demarcation with the significant financial resources under the Just transition fund, which will be invested in green measures in the cross-border region. Just Transition Fund as a new financial instrument of the EU will support the territories most affected by the transition towards climate neutrality and for preventing an increase in regional disparities. The *National Priority Framework for Action for Natura 2000* focuses efforts on ensuring effective management of the *National Ecological Network and protection of natural habitats and species* of European and national importance to halt biodiversity loss by improving the nature protection and conservation, biodiversity and green infrastructure. The new Euro-Med Transnational programme 2021-2027 that has been recently joined by North Macedonia and Bulgaria envisages implementing a green infrastructure concept that can gradually improve the availability of ecosystem services and support the vision of the biodiversity conservation as an economic value for the regions. Same purposes are also pursued by the ADRION programme, in which North Macedonia also takes part. The environment related actions in the Multi-annual Action Programme for Environment and Climate Action and Transport for the years 2014-201, under implementation in North Macedonia, had been taken into account during preparation the objectives to be covered by Priority 1. The experience that will be accumulated by the implementation of the 2021 EU-North Macedonia bilateral programme "EU for Environmental Standards and Clean Air" in the field of legal, institutional and administrative framework for ecological transition towards a modern and resource-efficient economy is expected to lead to a more competent and fully-fledged addressing of environmental issues under the Programme. The bilateral programme envisages the provision of support for creating Green belts. At the same time, the (Interreg VI-A) IPA Bulgaria North Macedonia 2021-2027 programme provides support for green infrastructure, and together, both instruments are seen to produce important complementary effects for the CBC efforts to address the climate emergency. Thus, the individual participation of Bulgaria and North Macedonia in different, wide-ranging EU funded programmes, creates important synergies with the IPA III programme. Most cross-programmes synergies take place in the environmental domain where joint efforts to improve the

ecological aspect of the socio-economic development and to sustain healthy and protected environment collide and thus produce greater impact, efficiency and positive footprint on the environment.

PRIORITY 2 MORE CONNECTED BORDER REGION (communication links, extended access to core TEN-T)

The project for “*Establishment of a new Border crossing check point (BCCP) Strumyani - Berovo*” between Bulgaria and North Macedonia under the current Programme supplements the interventions under the *Transport Connectivity Programme 2021-2027* for the development of relations with neighbouring countries. The expected outcomes of the BCCP project, together with the ones of the North Macedonia – Bulgaria CVIII Rail Interconnection (Beljakovce – Kriva Palanka), significantly contribute to the overall efforts for improving mobility and connectivity along the Orient/East-Med Corridor by facilitating regional trade, reducing travel times (including to destinations outside the CBC area) and bringing great benefits for local citizens and businesses in the region. Thus, the BCCP project builds on the achievements of the IPA II bilateral programme, notably the Multi-Annual Programme for Environment and Transport and at the same time plays a crucial role in the implementation of the EU's Economic and Investment Plan for the Western Balkans (Flagship 1 - Connecting East to West). With the improved regional connectivity, the cumulative effect of all EU investments in the mobility domain will further strengthen the cooperation between various stakeholders and the building of regional value chains.

Complementarities and synergies are also sought with the activities under the Border Management and Visa Policy Instrument (BMVI) and the IPA III Individual measures to strengthen the response capacity to manage migration flows and border management in the Western Balkans. As the strategic project is not mature enough at the stage of programme preparation, once the parameters of the BCCP and the technical design of the project are made available, a protocol will be signed between the managing bodies of Interreg VI-A IPA Bulgaria-North Macedonia, BMVI and IPA III with a view to establish clear complementarities and ensure lack of duplication, while respecting the eligibility rules as per the respective regulations guiding the work of the instruments referred above. Funding of large-scale IT systems as regards the strategic project is not planned under the Interreg VI-A IPA Bulgaria-North Macedonia.

PRIORITY 3 INTEGRATED DEVELOPMENT OF THE CROSS-BORDER REGION (Integrated territorial development of the regions)

Intervention in the *Programme Development of Regions 2021-2027* under *Priority 1: Integrated urban development* and *Priority 2: Integrated territorial development of the regions* for the implementation of infrastructure measures aimed at improving and developing culture, tourism, sustainable urban mobility, digital and safe transport connectivity, measures to improve the quality of the environment such as green infrastructure, measures to foster economic activity investments in technical infrastructure for the development of industrial zones or other infrastructure for the development of economic activities and support for innovation and development of SMEs. The Interreg VI-A IPA Greece North Macedonia Programme (South-East planning region of North Macedonia) envisages measures focused on supporting entrepreneurship and start-ups, oriented toward cross-border products and services, tourism, knowledge transfer and ICT.

The Instrument for Pre-Accession assistance (IPA) III[6] provides important assistance to North Macedonia complementing the vast EU funded support in the region. In the context of the IPA III funded programme “EU for Prespa”[7] as a tool for strengthening the joint commitment of the two countries to accelerate the Green Agenda on their territories. Despite the fact that the geographical coverage of the programme “EU for Prespa” does not overlap with the programme area, the added value of the Prespa initiative complements the ongoing work in the entire neighbouring region and the created synergies are of a benefit for the whole area. The policy domain, where the two programmes complement the most, is the Green Agenda where various pillars of biodiversity are put on central. A proper instrument of building the synergies between the two programmes might be the implementation of parallel or successive actions on different, but neighbouring territories, with the aim to improve ecological permeability and extend ecological corridors from east to west, and to support the development of sustainable tourist products. Throughout the implementation period the programme bodies will keep in contact with the EU Delegation in Scopje relating initiatives under Programmes EU4Growth, EU for Municipalities and the Regional and

Local competitiveness programme, implemented in North Macedonia, which actions remain highly relevant for priorities 1 and 3 of this Programme.

The Customs Control Equipment Instrument will not overlap with the current programme's activities. Each of these programmes will focus on different types of support to customs: the EU Anti-fraud Programme will support, among other, the purchase of equipment, including small customs equipment for customs and non-customs authorities, where it is specifically targeted at the protection of the Union's financial interests, while the new Customs Control Equipment Instrument is meant to finance the acquisition of larger customs equipment in order to improve uniformity in the performance of customs controls throughout Member States. For example, the following types of equipment could fall under the EU Anti-Fraud Programme's remit without overlapping with the Customs Control Equipment.

The Instrument for Pre-Accession will support enlargement countries in preventing and tackling organised crime and corruption and in strengthening their law enforcement and migration management capabilities, including border management will not overlap with the current programme's activities. It will support cooperation on migration, including border management, ensuring access to international protection, sharing relevant information, strengthening the development benefits of migration, facilitating legal and labour migration, enhancing border control and pursuing our effort in the fight against irregular migration, trafficking in human beings and migrant smuggling.

The Programme has a potentially strong impact on the progress of implementation of 5 out of 6 flagship initiatives of the EU-Western Balkans Strategy. Business development is seen by large as the most favourable area for cumulative EU policy and funding interventions in the Western Balkans (the so called WB6) and the CBC area to take place. By providing support to border businesses to internalize and join international value chains, the Programme complements the efforts of the Western Balkans 6 Chamber Investment Forum (WB6 CIF) to facilitate inter-business contacts and promote the Western Balkans as one investment destination. Therefore, the programme enlarges the opportunities for networking of business communities between the CBC area and the WB region and thus create prospects of emerging Balkan value chains (highlighted in the Border orientation paper, as well). The Programme plays crucial role in the WP6 Connectivity agenda, and partially on the security and migration flagship initiative, by laying the foundations for easier and faster movement of citizens, businesses and capitals between Western Balkans and EU through the construction of new border crosscheck point (BCCP Strumyani-Berovo) at the border of Bulgaria and North Macedonia. Under Priority 3 Integrated development of the cross-border region, the Programme will seek to expand the land connectivity by supporting the development of alternative mobility, including a grid of bicycle lanes, 'dirt' forest and country roads, helipads, etc. The Programme touches upon priorities of the Green agenda of WB6 in relation to protection and restoration of ecosystems. The contribution of the Programme on that objective go under the form of small projects supporting the development of green infrastructure with the aim to increase ecological permeability and prevent biodiversity loss. The strategic foundations (Digital Agenda for the Western Balkans) and the Programme concentration build strong synergies (in the area of digital economy and society) and take on identical paths to make citizens of WP6 region and CBC area capable of fully reaping the benefits of the fast-paced and inevitable digital transformation. Last, but not least, despite the continuous political disputes between Bulgaria and North Macedonia, the Programme sends a positive message to all concerned that regional cooperation and good neighbourly relations can contribute to growth and prosperity.

In terms of implementation of an interprogramme coordination approach to address geographical and thematic challenges and to facilitate interprogramme synergies, the managing bodies will take on two paths: 1) Invite representatives of managing bodies of all relevant (those whose geographical coverage overlaps with the CBC area) EU funding programmes to the JMC/JWG of the Programme; and 2) Set up interprogramme thematic working groups and staff/experts exchange at the stage of development of Guidelines for applicants. Furthermore, close coordination between the Managing Authority and the EU Delegation in North Macedonia will be maintained in order to maximise the effect of the assistance with other EU activities in the overlapping areas of support.

5. LESSONS-LEARNT FROM PAST EXPERIENCE

Despite the thematic concentration imposed by the EU Regulations in 2014 -2020 period, the areas of

intervention defined under INTERREG-IPA CBC Programme 2014 -2020 still remained quite diverse and without any interdependence. Opposite to limited (even reduced in 2014-2020 period) financial resources, the interest in the programme remained high during both programming periods. In 2007-2013 period – under the 3 open calls 320 projects were submitted and 100 contracts signed while in 2014-2020 period – under the 2 open calls 379 projects were submitted and 73 contracts signed. This comes to show that more than 75 % of the project proposals were not financed and that the scattered sectoral investments based on open calls have led on one hand to severe competition and high expectations of potential beneficiaries and on the other hand to fragmented and dot-like interventions, some of which were not directly linked to the actual needs and potential of the cross-border region. Despite the demonstrated high interest, the low competence of some beneficiaries in terms of project implementation of certain measures and the low level of partnership between public and non-governmental sectors contributed to insufficient capitalization of the project results. In addition exhaustion in generation of project ideas was observed – e.g. increased number of projects, with already financed similar ideas/objectives and in all calls most of the applicants are one and the same organizations/institutions. In order to improve the weak capacity of some beneficiaries to prepare and implement projects the new Programme will use Technical Assistance (TA) funds for organisation of the information days and training sessions for potential beneficiaries after the launch of the Calls for proposals and Partnership forums for identification of the project partners and also for trainings during the implementation period of the projects.

The Impact Evaluation of the 2007-2013 Programme, as well as the Midterm evaluation of 2014-2020 Programme, showed that, in correspondence to the diversity of the spheres of intervention, a wide number and range of outputs were delivered. From a financial perspective, it was observed a drastic discrepancy between available, requested and contracted funds - in average, the total budget of all applications exceeds with 345 % the available one, while only 20 % of the total requested funding has been contracted. Often, such financial disproportion is a precondition for weak programme effects in terms of efficiency and sustainability. That is why it is difficult for the programme to bring out benefits for the communities, to intensify its effects for the region and especially its value added achieved through cooperation. In that respect, in order a visible impact to be achieved, a new, more results-oriented approach in the implementation of the future programmes was recommended. It is expected that a better programme focus would strengthen linkages between needs and resources (through concentrating more funds to most demanded intervention areas) thus generating proportionate and sustainable effects on the territory.

6. MACRO-REGIONAL STRATEGIES (MRSs)

The territorial challenges that the Programme addresses (e.g. environmental threats, uneven socio-economic development, uncoordinated education, research and innovation systems) have been also recognized as such in the Danube Region Strategy (EUSDR) (Bulgaria) and in the Adriatic and Ionian Region Strategy (EUAIRS) (North Macedonia). This opens up possibilities to align relevant priorities of the Programme with the two MRSs and to embed the latter into the strategic framework of the reference programme. The programme area, however is not in proximity to either Danube or Adriatic and Ionian seas basins. This circumstance allows for MRSs embedding mainly from the perspective of indirect synergies and contributions. In particular, the synergies and coordination of actions between the Programme and the two MRSs can be potentially projected in the area of institutional capacity and exchange of practices/knowledge/solutions in the following MRSs priorities:

Priority Area 3 “To promote culture and tourism, people to people contacts” (EUSDR) and Pillar 4 “Sustainable tourism” (EUAIRS)

A substantial scope of the Programme actions that are going to be supported under priority ‘Integrated development of the border region’, will be focused on tourism. Investments are expected to improve tourism-related infrastructure and services, branding and marketing as well as to strengthen inter-institutional coordination and policy development while fostering the preservation of and re-connecting with natural ecosystems in pursuit of a sustainable tourism cross-border community. People to people relations are at the heart of this community.

Priority Areas 5 “Environmental Risks”, 6 “Biodiversity, landscapes, quality of air and soils” and 10 “Institutional capacity and cooperation” (EUSDR) and Pillar 3 “Environmental Quality” (EUAIRS)

Under priority 1 “Greener border region” the Programme will seek to improve green infrastructure as a

means to protect and expand ecological connectivity as well as to prevent biodiversity loss and ecosystem collapse. Public authorities have been increasingly recognized as key providers of ecosystem services in building and restoring green spaces, therefore putting forward practices for strengthening institutional capacity for climate change adaptation along with the dissemination of greening solutions would add on valuable impact to the achievement of EUSDR and EUAIRS targets.

7. PROGRAMME STRATEGY: main development challenges and policy responses

The policy and strategic framework of the programme came out as a result of a three-year long elaboration process. It first started in 2019 with regional consultations on both sides of the border complemented by a parallel study of cross-border territorial needs and potentials - both provided the bottom-up data and trends. During the meetings with the regional stakeholders some well-known territorial challenges have been confirmed as continuing and still unresolved (such as lack of diverse possibilities for work, high unemployment, low income, unevenly developed conditions for year-round tourism across the CB area, etc.). It has been confirmed that tourism is the most suitable sector for building strong cooperation links, but persistent mobility obstacles hamper sector's potentials to flourish and expand, partially because of the limited participation of tourism service providers in the programme (in most cases these are SMEs). The need to provide SMEs with equal access to programme resources and perceive the enterprises as change boosters addressing, however, their specific needs, particularly in the field of competitiveness and internationalization, was stressed out. The prospective of establishing cross-border added value chains in certain sectors was positively assessed. Extensive discussions on the need for institutions to do more to stop the loss of biodiversity have taken place during the regional consultations, because biodiversity is widely considered one of the biggest assets of the programme area. It has been expressed that classical restoration and preservation activities, that involve large amount of greening initiatives, could be extended to urban areas so that to achieve city green transformations which create positive impact on environment, health and well-being in general.

Most of the discussed territorial needs and potentials have found their evidence support in the Territorial analysis and have further been linked with key EU policies such as green and digital transition, TA2030, EU enlargement with the Western Balkans. In line with the Council Conclusions, good neighbourly relations and regional cooperation remain essential elements of the Enlargement process, as well as of the Stabilisation and Association Process. The abundant possibilities of PO5 for territorial development, particularly from the perspective of functioning of democratic institutions and economic reforms, which are part of the 'fundamentals', have been fully incorporated in the programme strategy and its implementation arrangements. Therefore, the programme is expected to contribute to the EU accession process and at the same time to the strengthening of the territorial cohesion. Having regard to all this, as well as taking into account the need for preservation of cultural, social and economic links between the regions of both countries, the JWG agreed on the following overall objective of the Programme:

To strengthen the territorial cohesion of Bulgaria - North Macedonia Cross-border region

The program goal is to help overcome the territorial differences between the program regions with extreme ranges of socio-economic development and help improve the overall economic performance of the program territory, which is lower than the EU average and the corresponding national level. The programme response to this challenge is the delineation of programme priority "Integrated development of the cross-border region" with 20% budget earmarked for SMEs to improve their competitiveness and to lay the foundations for establishing cross-border value chains (cooperative cross-border market). The implementation of the priority through the PO5 specific objective "Fostering the integrated social, economic and environmental development, cultural heritage and security in areas other than urban" addresses few other territorial challenges such as depopulation, aging, high unemployment (particularly youth one), low income level. The integrated development aligns fully with the programme objective, because both concepts precondition strong collaboration and cooperation between territorial actors. The promotion of genuine cooperation under that priority has been done at three levels: programming (JWG), implementation (through Interreg indicators preconditioning cross-border dimension of the investments) and management (joint committee will be set up to participate in the project selection process).

Furthermore, the programme responds to one of the biggest territorial challenges that creates considerable mobility and connectivity obstacles – the lack of enough border checkpoints to handle the increasing

traffic of people and goods between the two countries. Since this is important for the EU enlargement process and requires extensive amount of inter-institutional coordination and participation, as well as large funding, the JWG has agreed the programme solution (establishment of new BCCP within PO3 ‘A more connected Europe by enhancing mobility’) to go under the form of strategic project in order to link more accurately the programme support with the sought effect. This top-down approach to programming reaffirmed the EU accession process of North Macedonia while confirming the commitments between the two countries to further strengthen their neighbourly relations and the regional cooperation. In addition, the implementation of this project is expected to partially fill in the gaps in the cross-border road transport network, as being highlighted in the Border Orientation Paper as a need for joint actions.

The new EU cohesion legislative package made the policy actions arising from the Green Deal imperative for all EU funded programmes. Thus, the selection of PO2 as a priority in the programme was top-down driven. Even in the absence of this obligation, however, the collected bottom-up data from the regional consultations and the Territorial analysis in the area of environment unequivocally confirm the need for joint actions in the protection and preservation of the cross-border biodiversity. The interest of territorial actors to invest joint efforts in this field has been traditionally strong. Biodiversity loss is, again, identified as a key environmental issue in the programme area. The EU 2030 Biodiversity Strategy pinpoints biodiversity loss and ecosystem collapse as one of the biggest threats facing humanity in the next decade. Number of projects have been supported from 2007 to 2020 to tackle with this complex challenge. Most of the supported solutions have addressed the protection aspect of the problem, under the form of one-off joint initiatives, leaving, however, the preservation components of the biodiversity policy behind. The chosen PO2 SO (vii) represents a thematic continuation of activities of the 2014-2020 programming period of the activities under PA1 Environment, specifically SO1.1 “Environmental protection and sustainable use of the common natural resources of the programme area. Therefore, building on the achieved results in the field, the 2021-2027 programme will seek to support actions that either combine both practices (protection and preservation) or put a focus on the sustainable solutions for biodiversity preservation. An example for that is the development of green infrastructure (GI) which has been increasingly recognized as a common solution to various environmental issues due to its wide positive effects on all components of the environment, as well on the human well-being.

8. HORIZONTAL PRINCIPLES

The CBC programme will scrutinize each project approved for funding whether it contradicts the principles described here. From the viewpoint of the EU Charter of Fundamental Rights the MA will seek to ensure gender balance in the composition of JMC, as well as it will require from project promoters to adhere to the EU Charter and provide evidence for that. The MA will take any possible action throughout the preparation, implementation, monitoring, reporting and evaluation of the CBC programme to positively influence poverty eradication, social exclusion and any form of inequality and discrimination by promoting social inclusion and encompassing the principles and objectives of the EU Charter. All supported project activities, regardless of their sectoral focus, must contribute to the achievement of at least one of the selected 7 SDGs that are most likely to be tackled by the programme. These SDGs are: (7) Affordable and Clean Energy, (8) Decent Work and Economic Growth, (9) Industry, Innovation and Infrastructure, (10) Reduced inequalities, (12) Responsible Consumption and Production, (13) Climate Action, (15) Life On Land. Selection of projects as to how they contribute to the sustainable development as set out in Article 11 of the TFEU, taking into account the UN Sustainable Development Goals, the Paris Agreement and the "Do No Significant Harm" principle, is ensured through the JEMS application form which will be used for all POs. Furthermore, to ensure maximum adherence to the principles and targets of the Green Deal, each project supported by the programme, should have gone a positive DNSH (Do No Significant Harm (DNSH) Principle) assessment during the selection process, based on the programme analysis for compliance with the DNSH principle.

During the implementation of the programme the managing authority will promote the strategic use of public procurement to support policy objectives (including professionalization efforts to address capacity gaps). Beneficiaries should be encouraged to use more quality-related and lifecycle cost criteria. When feasible, environmental (e.g. green public procurement criteria) and social considerations as well as innovation incentives should be incorporated into public procurement procedures. A monitoring mechanism will be set by the Programme on the reporting and follow up of the developments related to

the horizontal principles. Overall progress will be reported to the European Commission regularly, accounting for all the operations. Finally, a dedicated part of the Programme evaluation will treat the actions in this regard.

The programme will also promote the New European Bauhaus (NEB) principle by requiring applicants and project promoters to align their project activities with the surrounding environment in order to provide for harmonious co-existence with nature, social inclusion and accessibility the objectives of this principle. Supported projects should ideally contribute to the regeneration of the environment and ecosystem functions and services, climate neutrality as well as the sustainable management and enhancement of cultural landscapes.

A programme contribution to EU climate and biodiversity targets is envisaged. The Programme will take into account the importance of combating the decline of biodiversity and will address the Biodiversity Strategy for 2030, estimating an indicative contribution to biodiversity objectives representing 14,87 % of its ERDF allocation (based on related Commission calculation methodology). The Programme estimates an indicative contribution representing 32,00% of its ERDF allocation to support climate change objectives and 43,91% to meet environmental objectives.

On e-cohesion, JEMS (joint electronic monitoring system) is the electronic system through which electronic data exchange will be made between beneficiaries and MA/NA during the whole life cycle of the operations and the Programme, in accordance with Annex XIV of the CPR. It will be fully functional with the launch of the Programme and will allow diminishing the administrative burden of beneficiaries.

The Durability of results principle is embedded in the implementation of the programme through regular monitoring practices of supported projects to make sure the provided funding is strongly linked with the sustainability of the achieved results and bring in the desired territorial effect.

1.3. Justification for the selection of policy objectives and the Interreg-specific objectives, corresponding priorities, specific objectives and the forms of support, addressing, where appropriate, missing links in cross-border infrastructure

Reference: point (c) of Article 17(3)

Table 1

Selected policy objective or selected Interreg specific objective	Selected specific objective	Priority	Justification for selection
<p>2. A greener, low-carbon transitioning towards a net zero carbon economy and resilient Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate change mitigation and adaptation risk prevention and management, and sustainable urban mobility</p>	<p>RSO2.7. Enhancing protection and preservation of nature, biodiversity and green infrastructure, including in urban areas, and reducing all forms of pollution</p>	<p>1. Priority1 : Greener border region</p>	<p>The programme area enjoys a great biological diversity. However, due to its highly varied geological, topographic and hydrologic conditions, the area is vulnerable to biodiversity harmful practices. According to the EU 2030 Biodiversity Strategy, biodiversity loss and ecosystem collapse are one of the biggest threats facing humanity in the next decade. That makes preserving nature and restoring healthy ecosystems a European priority. Central to this priority is the establishment of green infrastructure (GI) whose wide effects positively impact human health and wellbeing, support a green economy, create job opportunities and enhance biodiversity. Regional and local authorities have been increasingly recognized as key providers of ecosystem services in building and restoring green spaces. The 2019 ESPON interim report ‘State of the European Territory’ highlights that the CBC area enjoys high potential GI network coverage. As the green space coverage on urban scale is generally decreasing, policies addressing that deficit should focus on greening urban and peri-urban areas, improving the connectivity of urban spaces and on transforming land uses, dominated by non-vegetated open spaces, into green spaces with improved ecological qualities. These are only part of the measures the programme will seek to support in order</p>

Selected policy objective or selected Interreg specific objective	Selected specific objective	Priority	Justification for selection
			to enhance biodiversity by setting up ecological corridors to prevent genetic isolation, allow for species migration, and maintain and enhance healthy ecosystems. In this context, the EU 2030 Biodiversity Strategy encourages investments in green infrastructure to be implemented through cross-border cooperation among Member States, including through the European Territorial Cooperation. The EU strategy for promoting GI has also underlined the regional/cohesion dimension of the GI promotion. The projects supported under this SO will be in the form of grants considering the nature of the operations (cross-border dimension and relative reduced budget).
3. A more connected Europe by enhancing mobility	RSO3.1. Developing a sustainable, climate resilient, intelligent, secure, sustainable and intermodal TEN-T	2. Priority 2: More connected border region	In the CBC area there are currently 3 BCCP operating, servicing (BCCP Gyueshevo – Deve Bair, BCCP Logodazh - Delchevo and BCCP Zlatarevo – Novo Selo) a population of nearly 1 million people by providing direct access to Struma highway in Bulgaria which is part of the core TEN-T Orient/East-Med Corridor. The EU enlargement process has called on Bulgaria and North Macedonia to rise to the challenge of facilitating the annually increasing traffic of freight and movement of people between the two countries, either by enlarging the service capacity of the current border check-points or by opening a new BCCP between the two countries whose need for that has been recognized back in 1999 when Bulgaria and North Macedonia have signed a Bilateral Agreement for establishment of a new BCCP Strumyani-Berovo at the village of Klepalo connecting the municipalities of Strumyani (Bulgaria) and Berovo (North Macedonia). The

Selected policy objective or selected Interreg specific objective	Selected specific objective	Priority	Justification for selection
			<p>Commission's recent proposals envisage further integration of Western Balkan countries into EU policies, programmes and markets, and if border mobility obstacles persist, the speed up of the EU enlargement process may be jeopardized by the lack of basic connectivity factors. In this regard, the improved TEN-T access will create added value in a broader economic perspective spreading the spillovers to and facilitating the interlinkages in the transport and tourism sector. Expected investments for improved border and TEN-T access will produce considerable time travel savings, shortening also the time for accessing the very popular Bansko ski resort in Bulgaria (among the first ten in any topical rankings). The PO3 is selected as a leading policy due to the large impact of the improved border and TEN-T access on the regional connectivity and cross-border mobility. The implementation of the SO will go as a project of strategic importance supported under the form of a grant considering the nature of the operation (cross-border dimension and impact).</p>
<p>5. A Europe closer to citizens by fostering the sustainable and integrated development of all types of territories and local initiatives</p>	<p>RSO5.2. Fostering the integrated and inclusive social, economic and environmental local development, culture, natural heritage, sustainable tourism and security, in areas other than urban areas</p>	<p>3. Priority 3: Integrated development of the cross-border region</p>	<p>The expected increase in regional disparities and peripheralization, the urban-rural divide and the need to foster the implementation of the 'Leave no one behind' sustainable development goal ask for integrated policies on local level as a contrast to the sectoral approach who still dominates in local development practices in the CBC area. This emphasises the importance of tailored place-based approaches rather than territorially blind policies with little relation to territorial reality. The need to combat unevenly dispersed economic effects of sporadic interventions gave rise to the concept of participative</p>

Selected policy objective or selected Interreg specific objective	Selected specific objective	Priority	Justification for selection
			<p>and integrated territorial development that is able to boost inclusiveness, resilience and competitiveness by gathering key actors from any sectoral value chain in cooperative actions. Differences in access to services of general interest risk driving service providers, enterprises and social activities to relocate to areas with better access. This especially concerns remote areas that lack access to public services and economic and social opportunities. The borderline depicts a barrier and business activity remains mainly local and urban, with absent cross-border dimension and impact. Missing links in the cross-border provision of business services and such of general interest are a main factor behind the negative demographic dynamics and the inert economy that the area exhibits. Thus, the programme will contribute to the ‘A just Europe’ priority of the Territorial Agenda 2030 by applying a place-based approach, in contrast to the dot-like one. This entails the involvement of all actors playing active roles in the border economy and thus allowing for multi-sectoral, accountable and multi-level governance partnerships that are going to be set up to support the prosperity of the border region. The projects supported under this SO will be in the form of grants considering the nature of the operations (cross-border dimension and relative reduced budget).</p>

2. Priorities

Reference: points (d) and (e) of Article 17(3)

2.1. Priority: 1 - Priority1 : Greener border region

Reference: point (d) of Article 17(3)

2.1.1. Specific objective: RSO2.7. Enhancing protection and preservation of nature, biodiversity and green infrastructure, including in urban areas, and reducing all forms of pollution

Reference: point (e) of Article 17(3)

Promoting clean and fair energy transition, green and blue investment, the circular economy, climate adaptation and risk prevention and management in the cross-border region

2.1.1.1 Related types of action, and their expected contribution to those specific objectives and to macro-regional strategies and sea-basin strategies, where appropriate

Reference: point (e)(i) of Article 17(3), point (c)(ii) of Article 17(9)

Priority 1 Greener border region under PO 2 “A greener, low-carbon Europe by promoting clean and fair energy transition, green and blue investment, the circular economy, climate adaptation and risk prevention and management” had been chosen because the exploitation of new forms of ecosystem-based services, that are based on the large variety of greening measures, would contribute to the maintenance of healthy green, physical and living environment, and moreover would generate non-material benefits for people, including aesthetic qualities and recreational experiences.

The link between biodiversity and the provision of ecosystem services has not yet been built in the CBC area, despite the large amount of natural areas that enjoy various national and international protection statuses. The Territorial Analysis of the programme outlines the pollution of rivers, floods, landslides and fires as the biggest environmental problems of the border region. There are highly polluted river sections particularly within the catchment area of the Struma, Bregalnica, Strumica and part of the Vardar river resulting mainly from the direct flow of waste waters from industry (and mine sites) and households, mine deposits and the use of pesticides and fertilizers in agriculture. According to the EU 2030 biodiversity strategy, ecosystems and their services can be maintained and enhanced by establishing Green Infrastructure (GI) and restoring degraded ecosystems. GI is a strategically planned network of natural and semi-natural areas that are aimed at providing large scope of ecosystem services with a positive impact on all environmental components. As highlighted in the EU Green Infrastructure Strategy, investments in GI have significant potential to strengthen regional and urban development, including by maintaining or creating jobs. The development of ecosystem-based services in the CBC area would enhance the greening practices benefiting from the existing potential of the border region in and building on the well preserved nature and landscape, rich biodiversity, large number of protected areas and landscapes, taken environmental protection and risk prevention and mitigation measures.

Investments in the fields of environmental protection and risk management are based on the needs of the programme area, such as: underperforming environmental infrastructure, environmental risks, insufficient awareness of the population on environmental threats and lack of knowledge about environmental friendly solutions, etc. Building on the already existing potential of the border area, namely: well preserved nature and landscape, rich biodiversity, large number of protected areas and landscapes, investments in environmental protection and risk prevention and mitigation are an absolute pre-requisite for creating better living conditions for the people in the border area and a sustainable economic development. The proposed interventions are meant to alleviate the risks regarding loss of ecosystems, endangered biodiversity due to further pollution, strong climate changes largely touching upon on the need to protect urban and peri-urban biodiversity as important passages of ecological corridors. The predominance of human activities has made urban landscapes far different from natural ecosystems, and this has diminished the biodiversity of these landscapes. Through urbanisation, humans modify natural landscapes by alteration of landforms, land uses, and by changes to natural disturbance agents and hydrological networks. Conventional hydrological systems reduce urban ecological resilience by substantial removal of the vegetation cover and by alteration of urban ecosystems compared to natural

ones. There is why the programme set up group of actions aimed at promoting hydrological practices that diminish biodiversity loss. The implementation of all measures dedicated to reduction of pollution and protection of the biodiversity will improve the protection of nature for the benefit of people and of the economy. The CB cooperation in that policy area is expected to unlock ecosystem-based solution potential justified by the presence of a rich biological diversity as well as by the vast opportunities to build on bio-related achievements of the two previous programming periods.

The concept of “green infrastructure” is a relatively new one and special attention will be paid to promoting it and to developing pilot solutions that can be replicated later on. Therefore, the implementation of the specific objective will be based on the following approaches: integration (integration and coordination of urban green with other urban infrastructures in terms of physical and functional relations), multi-functionality (combine ecological, social and economic/abiotic, biotic and cultural functions of green spaces), and connectivity (physical and functional connections between green spaces at different scales and from different perspectives).

The non-exhaustive list of actions to be supported under Priority 1 is based on the EU typology of GI[1] and can be presented in the following groups:

- **Support for joint strategies, action plans** and concepts for developing new tools, instruments,
- **Transferring solutions** between relevant stakeholders, joint capacity building activities;
- **Investments in building greens** (green balconies, green walls, green roofs, atrium spaces, green pavements, green fences, noise barriers, etc.) based on the joint concept/strategies and action plans;
- **Investments in developing urban and peri-urban green areas, including improving connections between green spaces** (tree alley and street tree/hedge, street green and green verge, green and coloured squares, riverbank greens) based on the joint concept/strategies and action plans;
- **Investments in developing natural urban green areas** (urban park, historical park/garden, pocket park/parklet, neighbourhood green space, institutional green space, green sport facility, forest, scrubland, abandoned and derelict area with patches of wilderness) based on the joint concept/strategies and action plans;
- **Investments in developing green areas for water management** (green roofs, permeable surfaces, infiltration trenches, swales, detention basins naturalized storm water pond, bio- retention areas);

The types of actions have been assessed as compatible with the DNSH principle, since they are not expected to have any significant negative environmental impact due to their nature, and they have been assessed as compatible following the approach under the Recovery and Resilience Facility (RRF).

For the purposes of implementation of Priority 1 the Programme will seek to apply instruments that would correspond to the limited budget and the objectives set, such as Small Project fund or other simplified options.

All projects that envisage building of new or rehabilitation of existing infrastructure, regardless of its property rights, must comply with the environmental legislation of the respective country before implementation stage. This is verified by the MA at the application stage.

The envisaged actions contribute to the achievement of the green targets of the EUSDR and the EUAIRS, particularly under Priority Areas 5 “Environmental Risks”, 6 “Biodiversity, landscapes, quality of air and soils” (EUSDR) and Pillar 3 “Environmental Quality” (EUAIRS).

2.1.1.3. Main target groups

Reference: point (e)(iii) of Article 17(3), point (c)(iv) of Article 17(9)

Green infrastructure (GI) practices contribute to resilient communities and result in multiple benefits for a given territory. Influenced by connectivity, multifunctionality and spatial planning on multiple scales, GI can improve human health and wellbeing, support a green economy, create job opportunities and enhance biodiversity. The presented main target groups under the specific objective “Enhancing protection and preservation of nature, biodiversity, and green infrastructure, including in urban areas, and reducing all forms of pollution” illustrate all those groups of communities that benefit the most from the multisectoral effects of the improved green infrastructure:

- *Local population and visitors*
- *Local authorities and regional structures of central administration*
- *R&D, academic and scientific institutions*
- *NGOs*

Developing sustainable, climate resilient, intelligent and intermodal national, regional and local mobility, including improved access to TEN-T and cross-border mobility

2.1.1.1 Related types of action, and their expected contribution to those specific objectives and to macro-regional strategies and sea-basin strategies, where appropriate

Reference: point (e)(i) of Article 17(3), point (c)(ii) of Article 17(9)

The implementation of this priority will go under the form of a project of strategic importance “Establishment of a new Border cross check point (BCCP) “Klepalo” between Bulgaria and North Macedonia”. Its main goal is to improve regional connectivity and boost the economic growth of the programme area by (1) facilitating the increasing traffic of people and goods between the two countries, (2) strengthening communication links between the two countries, and (3) improving and extending access to core TEN-T, including the connection with Corridors IV and VIII.

The need for strengthening the regional connectivity and to facilitate the increasing traffic of people and goods between Bulgaria and North Macedonia has since long been on the agenda. The regional consultations in 2019 have clearly identified the BCCP Strumyani – Berovo as an investment of strategic importance to be supported by the Interreg VI-A IPA Bulgaria-North Macedonia programme, taking into account the gradual expansion of the socio-economic interlinkages between the two countries due to positive prospects of the EU enlargement. On 14 June 1999 in Skopje, an agreement between the Government of the Macedonia and the Government of Bulgaria for opening new international road Border Crossing Check Points (BCCP) Strumyani – Berovo and Simitli – Pehchevo was signed.

Missing links in the CB provision of business services and such of general interest are a main factor behind the negative demographic dynamics that the area exhibits. The lack of infrastructure favouring the provision of services of community and business interest further impose severe social implications including increased social exclusion and inequalities, as well as challenges for recreational service provision, labour markets and housing. In terms of interregional connectivity, the lack of railway connection between the two countries and the increasing cross-border traffic have urged the need to improve service capacity of the current BCCP and enlarge TEN-T access, taking also into account the prospects of the accelerated EU enlargement. Data from the Bulgarian Customs Agency show an annual increase in freight traffic between the two countries by an average of 10%. Wide socio-economic benefits with spillovers and externalities extended outside the border area (spreading to Western Balkans). With the improved regional connectivity, the cumulative effect of all EU investments in the mobility domain (North Macedonia – Bulgaria CVIII Rail Interconnection

(Beljakovce – Kriva Palanka), Flagship 1 - Connecting East to West of the EU's Economic and Investment Plan for the Western Balkans) will further strengthen the cooperation between various stakeholders and the building of regional value chains. Furthermore, the investments under this priority will contribute to the EU external policy by adhering to most up-to-date standards in safeguarding security and border control. The broad and multi-sectoral impact of the investments on various EU policy strands defend its strategic orientation on the regional connectivity and cross-border mobility in an area that

is soon expected to join the EU family.

The non-exhaustive list of actions of the strategic project goes as follows:

- Upgrade of the existing facility and construction of new BCCP facility;*
- Purchase of specialized technical equipment and furniture;*
- Rehabilitation of existing and construction of new roads in both countries;*
- Environmental and other project-related assessments.*

The new BCCP will be operating in close proximity to BG0000366 BG "Kresna-Ilindentsi" and BG0002003 "Kresna" NATURA 2000 sites on the Bulgarian part of the border. Due to lack of maturity of the technical design of the strategic project, a Bilateral Expert Committee (BEC) has been set up in April 2022 (under art. 4 of the BCCP Strumyani – Berovo bilateral agreement) to determine all parameters of the new BCCP. The output of the work of BEC will serve as a basis for the preparation of the investment project which will be accompanied by the mandatory environmental assessment procedures set out in chapter VI of the Environmental Protection Act of Bulgaria (Environmental Impact Assessment-EIA) and art. 31 of the Biological Diversity Act of Bulgaria (Appropriate Assessment-AA) in light of the approved sight-specific conservation objectives.

The realisation of the strategic project will go through the following steps:

1. Project scope and preparation:

- Project design accompanied by the applicable EIA and AA procedures;*
- The alternatives, including the “zero alternative” (without project scenario) will have to be deeply analysed in the applicable EIA and AA procedures according to the relevant EU and national legislation in force (see art. 10(3) EIA Regulation);*
- The AA shall address the approved by the Ministry of Environment and Waters site-specific conservation objectives for all potentially affected sites (including Kresna – Ilindentsi) (see Regulation on AA);*
- The above two assessments will address also the cumulative impacts of the above-mentioned infrastructure project with other infrastructure projects affecting the site, considering that the Struma motorway and the related railway connection. (see art. 10 (3) and art 14 (1) of EIA Regulation).*

For the territory of North Macedonia the strategic project shall also comply with all the applicable environmental legislation.

- Interinstitutional Committee including environmental authorities will be established to coordinate and monitor that all the applicable legislation and procedures are respected as related to the strategic project.*

Expected outcome of this first step: in force EIA and AA Decisions for approval of the investment proposal “New BCP Strumjani – Berovo”.

Prior to approval of the design, the design documentation is additionally tested for compliance with the construction and environmental standards by an independent consultant which guarantees that all conditions are met and that the project design complies with the requirements. This evaluation report is a prerequisite for the issuance of a Construction Permit.

The project will receive funding for the investment design and for carrying out applicable environmental assessment. In case there are no positive EIA/AA Decisions the project would not acquire Construction Permit and will not be eligible to receive funding for the implementation of the works envisaged.

2. Implementation of works activities

During implementation of the works, the control of the compliance with the conditions of the EIA and AA Decisions will be done from the following state institutions:

-National Construction Control Authorities;

-Regional Inspectorate on Environment and Water;

- Basin Directorate;

- Managing Authority/National Authority.

The establishment of the new BCCP and the purchase of technical equipment will be in line with the Schengen acquis and all legal and technical requirements applicable for border crossing points and the management of the external borders, to the extent applicable to Bulgaria.

The investments will potentially have an impact on Target III – Improving the systems of border control, document inspection management and cooperation on consular related issues in the Danube region of the Priority Area 11 Security of the EUSDR by applying most up-to-date standards in safeguarding security and border control systems. With the improved access to the core TEN-T network, the project makes undisputable contribution to the implementation of the Topic 2 (Intermodal connections to the hinterland) of the Pillar 2: Connecting the Region of the EUSAIR.

The types of actions that the project will implement have been assessed as compatible with the DNSH principle, in the same way as stated beforehand.

The '8th Cohesion Report: Cohesion in Europe towards 2050' states that less developed regions and peripheral regions need a new development paradigm. Likewise, the experience from the previously implemented programmes and provided recommendations from the performed evaluation shows that there is a need to change the approach for achieving programme targets and objectives in a way to substitute the uncoordinated and dot-like investments with multilateral- and multi-sectoral- driven solutions in all key policy domains that define the degree of territorial cohesion. Integrated territorial development, anchored in place-based approaches and the involvement of all governance levels, as outlined in the new 2030 Territorial Agenda, is believed to be the new development paradigm making the most of the potential of the programme area. Priority 3 'Integrated development of the border region' will give the opportunity common challenges of the border area to be tackled through a dedicated territorial strategy, applying integrated measures across different sectors. The integrated investments for fostering the territorial development in local economy will bring higher added value and ensure the leverage effect of the ERDF and IPA funds.

The current, pre-final draft version of the TS pursues one main strategic objective, underpinned by two specific objectives (please, refer to section 2.3.5 for justification), namely:

Strategic objective: *Achieving integrated territorial development with a focus on competitiveness and tourism development*

Specific objective 1: *Increase the competitiveness of the local economy and improve the business*

environment

Specific objective 2: *Development of an attractive, all-season tourism product by means of smart solutions that ensure universal access and participation*

- Joint actions aimed at improving the knowledge capacity of the SMEs to operate in a greener, more digital and more competitive environment (acquiring new knowledge and skills, incl. access to external finances);

- Joint solutions aimed at increasing the productive capacity of the SMEs to become greener, more digital and more competitive (technological modernization);

- Actions aimed at building effective product development process (it encompasses all steps needed to take a product from concept to market availability) and reaching new markets (marketing, entrepreneurship, internationalization);

- Joint actions aimed at developing all-season, integrated and resilient tourist products, accompanied by competitive branding and marketing practices, with the aim to untap the cross-border tourism potential by increasing the economic benefits of the sustainable use of its resources while prioritizing the protection of the environment;

- Actions aimed at rationalizing the use of tourist resources in the region, incl. development of new integrated regional tourist products; investments in infrastructure and facilities to support tourists; strengthening the links between natural and cultural sites; training of staff of tourist attractions; improving marketing practices and brands..

- Actions aimed at improving the mobility and connectivity of the transport and engineering infrastructure by a system of alternative mobility, including a grid of bicycle lanes, 'dirt' forest and country roads, and etc.;

- Actions aimed at elaborating and applying joint measures for reducing the vulnerability of services in the tourism sector to the effects of pandemic and epidemic situations.

From a typological point of view the TS shall support a wide range of actions – research and development activities; creation and dissemination of information, knowledge and skills; trainings; services; networking; policy making; minor renovation, improvement, and maintenance of roads and facilities of public importance; environmental protection and preservation, etc. The cumulative outcomes of all these diverse actions that are going to address broad thematic obstacles and challenges shall produce the integrated effect on the territorial development.

Since the TS addresses the root of one of the main challenges of the programme area - income levels that are far below the EU average, a proportion of 20% of the priority budget shall be allocated under the form of direct support to SMEs, where applicable through the tool of Small Project Fund in compliance with art. 25 of the REGULATION (EU) 2021/1059.

The types of actions have been assessed as compatible with the DNSH principle, in the same way as stated beforehand.

It should be noted that green and digital solutions shall be incorporated as horizontal principles and thus become integral part of all supported, under the ITS, projects. This decision is seen as a programme instrument to promote the new cohesion policy.

The ITS is a multisectoral strategy and it develops interlinkages with the EUSDR and the EUSAIR in a number of cross-strategy areas such as: culture and tourism, knowledge society, competitiveness, institutional capacity and cooperation.

All projects under TS that envisage building of new or rehabilitation of existing infrastructure, regardless of its property rights, must comply with the environmental legislation of the respective country before implementation stage. This is verified by the MA at the application stage.

The Programme will promote the durability of the project results with durability period shorted to three years (Art. 65 CPR). The programme authorities acknowledge the availability of risks and uncertainties that could affect the capacity of the supported businesses to deliver results in the long term. The following main risks are identified: ongoing economic disturbances caused by the lasting COVID-19 pandemic, potential market fluctuations and downturns caused by conflicts close to the CBC region, insufficient experience working in a cross-border context. The administrative capacity of MSMEs is the issue where the Programme authorities could support enterprises to a great extent by providing tailor-made trainings and other dedicated events complemented by parallel mentoring and counselling upon beneficiary request, as well as through MA/NA/JS initiated online/offline meetings with concerned beneficiaries if their project performance and monitoring outcomes indicate potential issues.

2.1.1.3. Main target groups

Reference: point (e)(iii) of Article 17(3), point (c)(iv) of Article 17(9)

In the implementation of the framework of PO5 the support for some projects/operations/activities will be a priority. That is specifically valid for the integrated territorial development of business services, services of general interest, city-village relations, etc. The CBC area is considered to have untapped economic potential and actions targeted at SMEs and their improved participation in regional value chains are expected to strengthen the territorial cohesion and positively contribute to the economic growth of the region. The coverage of the listed below target groups will have a favourable effect on the use of the economic potential of the contiguous territories to the maximum extent. This should increase the competitiveness of the local economy and improve the business environment in the region.

-Civil society

-Local/ regional bodies and authorities, regional structures of central public authorities

-NGOs

-R&D, academic and training institutions

-Social institutions

-MSME's

-Local population

2.1.1.4. Indication of the specific territories targeted, including the planned use of ITI, CLLD or other territorial tools

Reference: Article point (e)(iv) of 17(3)

Locally developed and implemented Territorial Strategy (TS), in accordance with art. 28 (c) of the CPR Regulation, will underpin the implementation of Priority 3. The TS will seek to reinforce the integrated approach to further strengthen territorial development axes built upon functioning cross-border linkages in the business domain. The TS looks into existing socio-economic and governance flows across the border region making up the entire programme territory a functional area. The programme area is considered functionally coherent due to the following particularities:

- small size of the programme territory – below the (Interreg VI-A) IPA CBC programmes average. The smaller size questions the economic rationality for delineating functional areas for subsets of the territory;*
- identical demographic and socio-economic challenges depict the entire programme area;*
- uneven spread of common territorial assets and economic activities across the entire programme area, resulting in scattered functional interlinkages;*
- broad participation legitimizes the selected approach - a Task Force Group (TFG) made of local stakeholders, who develops the TS, has already agreed on the assessed territorial characteristics and functionalities.*

Although still a catching up region with internal disparities from the viewpoint of GDP, GVA and FDI, in the last 10 years there has been convergence between the two parts of the cross-border region, making implementation of joint economic policies an opportunity for territorial cohesion. Business clusters are the policy domain who meets all key principles of a functional area exhibiting high degree of interactions within the programme area. CB business cooperation emerged in early 90s and it has been gradually expanding and adapting to changing technological and competitive factors. Higher-level development centres, such as Kumanovo, Kyustendil, Shtip, Blagoevgrad, and Strumitsa, play a particularly important role in the business cluster function of the programme territory. These five districts exhibit the common characteristics of a functional area, but due to their limited geographical coverage, it is hard to tailor them with investment plans. Besides, their intercity relations need to scale up and set up a sort of intraregional economic area in order to further develop functional linkages. However, there is no credible and reliable statistics at CB level to illustrate the precise degree of border interactions in the business domain. Instead, a proxy for this assessment is programme historical data underpinned by corresponding national-level statistics (see below). The most recent programme data (2014-2020) show that the biggest interest and needs for doing business between stakeholders from both sides of the border come from the tourism cluster where it enjoyed 43% share (the biggest) of all project proposals. Likewise, the share of contracted applicants (37%) under the tourism priority has also marked the highest programme value. The extensive programme support to tourism increased the degree of cross-border valorisation of cultural and natural heritage through cooperation in tourist offer, connected services and creative industries . Statistical data for 2019 (not most recent data are used to avoid data distortion due to COVID-19 pandemic) on trips of Bulgarians to North Macedonia show that nearly half of the trips are tourism-oriented (45%) and a bit less (30%) are work-driven. Reciprocal data for Macedonians travelling to Bulgaria displays even larger ratio - 80% out of all trips are of tourism purposes and 15% are triggered by professional incentives. Following deductive approach, provided nation-level data can be narrow down to regional level and infer strong arguments in support of the delineation of the business clusters functional area across the programme territory prioritizing two policy courses for business development - tourism (TS specific objective 1.2) and CB value chains (TS specific objective 1.1). Bulgaria and North Macedonia have been trading duty-free since 2001. Bulgaria is among the biggest trading partners of North Macedonia, and that is a key enabling prerequisite for building regional value chains. In the last five years, the total export of Bulgaria to North Macedonia has been increased by 42% , while reverse data show a slower growth rate of North Macedonian's export to Bulgaria amounting to 14% (same source as beforehand). The tourism

development axis of the business cluster function is one of the few domains along with ICT, services, consumer goods (mostly food and beverages) and raw materials (mineral products, metals, stone and glass) which exemplify large cross-border economic synergies and high potential for building CB value chains. Supporting value chains, built on existent business networks and clusters, is central to the TS because value chains encompasses all economic interactions and interdependencies of a given territory. The TS integrated, multi-sectoral and cooperation support to economic operators to build CB value chains is crucial for the sustainable development of the tourism, because it is a cross-sectoral industry, which includes a great variety of related products and services. Considering the fact that the tourism is the sector with the largest economic impact on the area, the added value of focusing the TS support on CB tourism and CB value chains increases the intra-regional functionalities and strengthens further the cohesion of the territory. The composition of the TFG is also built on the concept of territorial coherence, i.e. actual participation of stakeholders in the TS evolution is done through nominations of persons, for members of the TFG, from the entire programme area. These persons act as representatives of various interest groups. After the development of the TS is finalized, the TFG will be transformed into Strategy Board (SB). The transition of TFG into SB is seen as a way to sustain the local ownership of the TS and at the same time to ensure broad public representation in its governance. Thus, SB reflects the partnership principle comprising relevant actors from both sides of the border. The SB will: (1) select project proposals based on jointly developed, with programme bodies, selection criteria, (2) agree on the content of the application package, and (3) govern the entire implementation of the TS by informing programme bodies on the TS progress within a certain timeframe. After the transition of the TFG into SB, the MA will carry out thorough assessment of the SB members needs to make sure their competences match the assumed duties and responsibilities. If gaps are identified, the MA/NA will draw a training plan and organize training/consultation sessions to close identified knowledge, skills, and performance gaps, particularly in projects selection. The JMC is the main body to regularly review any issues that affect the performance of the programme (Article 30(1)(b) Interreg) and progress in administrative capacity building (Article 30(1)(g) Interreg. The TS shall be endorsed both by the SB and the JMC, and checked by the MA/NA – all that by the end of 2022/beginning of 2023. The implementation of the TS will be organized in open calls for proposals. Rules of procedure, that guide the entire project selection process under the TS, are currently being developed and are expected to be finalized by the time the start of the TS is officially announced. Therefore, no administrative delays in the implementation of the TS are foreseen.

4. Action taken to involve the relevant programme partners in the preparation of the Interreg programme and the role of those programme partners in the implementation, monitoring and evaluation

Reference: point (g) of Article 17(3)

According to Article 8 of Regulation (EU) 2021/1060, each MS organizes a partnership with local and regional public authorities, economic and social partners, civil society and research organizations. The entire programming process was carrying out in full compliance with this article respecting the partnership and multi-level governance principles.

Regional consultations

The programming consultation process has started in 2019 when a series of meetings on both sides of the border with the aim to identify the local needs and potentials and to incorporate proposals by the stakeholders regarding the prioritization of policy objectives and possible interventions. Representatives of wide range of relevant stakeholders (more than 100) took part in the meetings. Participants in the consultations agreed on the need to propose joint measures to tackle the untapped tourism potential, that is different from the one related to ski and spa tourism, by addressing the underdeveloped tourist infrastructure and related services. Stakeholders expressed willingness for including new type of beneficiaries, partnerships and activities (through a direct support to SMEs), but also insisted on the sustainability of the previous ones and on capitalizing the experience in cooperation between the two countries. The majority of stakeholders stood up for PO5, considering the implications of the objective as most suitable for boosting the CB economy. The issue concerning the project (proposed under the External Border Initiative in 2003 that failed to be completed) for construction of access road and opening of a new border crossing between the two countries at Strumiani – Berovo, was raised by the stakeholders as an extremely important one. In that respect, it was suggested that the Programme should support a strategic project for fulfilment of the still pending bilateral governmental engagements (signed back in 1999).

Following the regional consultations, a questionnaire was sent to the participants where they pointed out the challenges the area faces in regard to the socio economic development and the spheres of interventions in which the programme could bring an added value. The respondents strongly supported the future programme to be more focussed by addressing local challenges and needs of the border region.

Joint Working Group (JWG)

In October 2019 a JWG has been set up for elaboration of the Programme. One of its main tasks was to periodically review and make suggestions and proposals to the programming progress, to approve the main stages of the programme preparation and finally to agree on programme documents and narratives.

Respecting the partnership principle JWG is being composed of a balanced number of representatives of the two partnering countries, including representatives of public authorities (national, regional and local), economic, social and environmental partners. In order to ensure a transparent and balanced representation of the civil society in the JWG, Managing Authority carried out a selection process of non-governmental organisations. Following the assessment of the submitted proposals, several NGOs in the area of education, science and culture became members of the JWG.

In its course of work, JWG adopted the following programme-related documents:

- The first meeting of the JWG took place in Sofia on 09.10.2019 on which Rules and procedures and a Concept note with a time-schedule for the programming process were adopted;*
- In July 2020 the Territorial Analysis for Bulgaria - North Macedonia Cross-border Area including the SWOT analysis was approved;*
- The first draft Programme's Intervention Logic was approved in October 2020. Following the interinstitutional agreement at the end of 2020 on the draft cohesion policy regulations, including the draft Interreg regulation and its requirements on the thematic concentration, the draft Programme's Intervention logic was revised accordingly and was discussed and approved by the JWG during online meeting on 11 February 2021.*

- The first draft of the programme (sections related to programme strategy - territorial needs and potentials, objectives and priorities, indicative actions, communication measures) - was approved and finalized in January 2022, while the full draft of the programme was presented for discussion on 11 March 2022.

Task Force Group on the elaboration of the Integrated territorial strategy (TS) for the CBC region

For the purpose of implementation of PO 5, the MA/NA organized a bottom-up driven process for setting up a Territorial Strategy in compliance with art. 29 of the CPR Regulation. A Task Force Group (TFG) was established to lead the process and agree on the final version of the TS representing all relevant stakeholders. The main responsibility of the TFG is to collaborate with the Consultant during the elaboration of the TS and to feed in results of dialogues with relevant stakeholders, databases, expert positions etc. The first draft of the Strategy has been published for public consultations on April 14, 2021 as received comments from local stakeholders had been incorporated in the revised version of the TS.

Public campaign for collecting project ideas under the TS

At the end of 2021 a public campaign for collecting project ideas under the TS was carried out to sort out potential operations against a set of three main criteria: distinct CBC effect, explicit contribution to TS objectives, degree of maturity. The purpose of the campaign was twofold: (1) to verify once again that measures of the strategy are able to adequately respond to territorial needs and (2) to allow identification of areas for intervention of the TS's Call for proposals. During the campaign, 5 educational webinars were organized attended by more than 170 participants, where the latter were also trained and supported in presenting their project ideas touching upon the complexity of PO5 and the functional approach in the planning and implementation phase of the TS and the programme. The MA/NA will provide continuous training and educational support on that through digital (programme's website: library section, Q&A and online chatting options for exchange of information, partner community platform) and in-person interactive communication (various programme events, such as meetings, campaigns, info days, topical trainings, consultations).

Public consultations of the Environmental assessment report (EAR) of the Programme and of the TS

The first EAR consultations were organised in July 2021 (in Bulgaria) and in August 2021 (in North Macedonia) for determination of the scope and content of the EAR. The second round of consultations were conducted in the period November – December 2021-January 2022 (in Bulgaria) and in January-February 2022 (in North Macedonia) on the EAR. The received comments from all institutions and stakeholders from both countries were reflected in the EAR and their legal compliance was confirmed in the competent body's EAR final opinion..

Public consultations on the draft programme document 2021-2027

Regarding the preparation of the final version of IPA III programme 2021-2027 public consultations on draft OP had been initiated in the period November 2021-February 2022. Various representatives of regional and municipal administrations, non-governmental organizations, companies, professional organizations, academia, media and other stakeholders from Bulgaria and North Macedonia took part in the final round of public discussion and public consultations. The outcomes of the consultations showed strong interest and readiness of the stakeholders to participate in the programme.

Implementation, monitoring and evaluation

In accordance with Article 28 of Regulation (EU) 2021/1059, a Monitoring committee to monitor the implementation of the programme (JMC) will be set within three months after the approval of the Programme. The composition of the JMC will respect the principles of partnership and multi-level governance and will include public authorities (regional, local and other); economic and social partners; representative of civil society, such as environmental partners, NGOs, and bodies responsible for promoting social inclusion, fundamental rights, rights of persons with disabilities, gender equality and non-discrimination; research organisations and universities from both sides of the border. The JMC shall also involve stakeholders from the regional consultations and members of the JWG to ensure consistency between programming and programme implementation. The main competencies and responsibilities of the JMC will be set up in accordance with Article 30 of the Regulation (EU) 2021/1059

The MA is determined to take on pro-active course of programme implementation. New approaches (integrated territorial development), target groups (SMEs) and challenges (COVID-19 pandemic) shape the focus and particularities of the programme which assume the organization of new, tailor-made, flexible and hybrid (combining digital and in-person mode of communication) initiatives. The content of these initiatives will be further streamlined to meet stakeholder and programme bodies needs and close knowledge, skills, and performance gaps that may occur. The initiatives could take formal, informal and digital forms. In addition to the traditional info days and the public consultations on programme-related documents, there might be organized "Consultation Days", various festive days (e.g. EC Day), topical training campaigns, match making events to support the generation of integrated projects, project search platforms (particularly from the viewpoint of SMEs) and other networking events.

The variety of the type of actions described allows the multi-level mobilisation of the Programme partnership at each key stage of its life cycle (preparation, implementation, monitoring and evaluation), at the local level of the partnering countries.

5. Approach to communication and visibility for the Interreg programme (objectives, target audiences, communication channels, including social media outreach, where appropriate, planned budget and relevant indicators for monitoring and evaluation)

Reference: point (h) of Article 17(3)

The Programme will take stock of good practices from the previous period and show a flexible approach to reach out the targeted audience. All these are translated into the following communication objectives by taking into account the communication needs specific for each stage of the Programme life cycle and each target group:

- *to raise general awareness towards the Programme*
- *to attract the interest of potential beneficiaries*
- *to support beneficiaries in project implementation*
- *to disseminate the achievements of the Programme and highlight the added value of EU funding*

Each communication objective will be transferred into specific communication activities. The main focus of the activities addresses the potential applicants, the beneficiaries, the stakeholders and the institutions involved in the implementation. Where applicable, measures for facilitating people with disabilities will be in place.

The communication strategy identifies the following main target groups: applicants, beneficiaries, national, regional and local governmental and non/governmental actors, MSMEs and their professional organizations, R&D, education and training institutions, EU institutions, media from both countries.

The mix of communication channels takes due account of the programme's thematic objectives. There are both the digital instruments and events.

For PO2 the specific target audience is administration, R&D, academic and scientific institutions and NGOs. Being the "green" priority the main communication message will be focused on the eco-changes that the projects deliver and how they can be multiplied. Youngsters will be actively involved in events.

For PO3 the specific target groups are the local population and administration. Being the project of strategic importance, two flagship events are planned for the beginning and the end of the operation with the participation of wide range of stakeholders, including the European Commission. There will be on-the-spot checks with media and the construction works will be regularly filmed. The beneficiaries will be assisted by day-to-day support and trainings.

For PO5 the specific target groups are the local population, administration, NGOs, R&D, academic, training and social institutions and MSMEs. Being the Priority with the highest budget share the communication activities started during the elaboration of the strategy though a wide participatory approach involving all stakeholders. The launch of the implementation of the ITS will be accompanied by an information campaign and match-making events. Special attention will be paid to the new type of beneficiaries such as MSMEs.

Communication Channels:

1. Digital

Like a main source of information, the new website will retain the main structure as the one from the 2014-2020 period. It will be linked to the single website portal providing access to all programmes of Bulgaria.

The Programme will use Facebook and YouTube as the main social media channels. In order to reach maximum audience MA will use Search Engine Optimization (SEO) and ads in Google (Google Ads), Facebook and You Tube.

Other communication activities include press releases, publications, interviews, video and photo stories, e-brochure/newsletters, info graphics, plates with the Programme logo and EU flag at the building of the

MA, NA, JS.

2.Events/trainings

Events are envisaged for the European Cooperation Day and for the celebration of holidays in the CBC area, thematically related to Programme objectives and the projects implemented. Meetings will be organised for match-making events and for public discussions. Trainings will be regularly provided for all beneficiaries. All learning materials will be available on the website and social media. Promotional materials will be disseminated on public events.

BUDGET

The communication budget is 0,3% of the total programme resources and is distributed for digital communication (57%), events and trainings (32%) and promotional materials (11%).

MONITORING AND EVALUATION

The communication officer will be responsible for monitoring and coordination of communication and visibility measures.

MA will report to the JMC once a year the progress in the implementation of the communication activities and on the achievement of the indicators. All actions will be regularly evaluated and results will be presented for approval to the JMC.

Sources of data for monitoring and evaluation will be the internal databases of MA, NA and JS, Google Analytics, specific tracking tools for social media platforms and surveys.

Evaluation of the communication strategy will be also part of the programme evaluation.

Type of activities | Output indicator | Target 2029 | Result indicator | Target 2029

1. **Events** | No of events | **25** | Overall usefulness of the event for attendees (survey) | **75% CSAT**
2. **Events** | No of participants | **1300** | Overall usefulness of the event for attendees (survey) | **75% CSAT**
3. **Publications** | No of publications (incl. Social media) | **350** | Overall usefulness of the publications for readers (survey) | **75% CSAT**
4. **Programme website** | No of visits | **70000** | Overall usefulness of the site/page for readers (survey) | **75% CSAT**
5. **Social media** | No. of followers/subscribers | **700** | No. of shares, likes, views, comments and hashtag mentions | **1000**

6. Indication of support to small-scale projects, including small projects within small project funds

Reference: point (i) of Article 17(3), Article 24

The programme allows for projects of limited financial volume to be implemented in compliance with Art.24 of the ETC Regulation.

The programme will provide direct support to regional MSMEs to meet new competitiveness challenges arising from the new EU policy courses of development (e.g. green and digital transition), EU enlargement prospective, as well as from the need to overcome certain economic deficiencies (limited CBC market) and events with unfavourable impact on MSMEs performance (e.g. the outbreak of Covid-19). The programme will devise the support to enterprises in full respect of the legally defined support framework which requires a strict application of the de-minimis rules (Regulation (EU) 1407/2013). The corresponding legal provisions impose financial limitations (EUR 200 000 for each undertaking over a 3-year period) on MSMEs projects that are eligible for programme funding. Therefore, the support for enterprises under Priority 3 'Integrated development of the border region' (totalling 20% of the priority budget) will go under the form of small-scale projects for up to EUR 200 000 per undertaking (that includes beneficiaries and partners).

The support to MSMEs through a small project fund (as defined in Article 25 of the Regulation (EU) 2021/1059 on ETC) is considered an option whose feasibility will be examined and applied if applicable. Possible selection of SPF as an operation will be at the discretion of the managing body of ITS/ JMC.

7. Implementing provisions

7.1. Programme authorities

Reference: point (a) of Article 17(6)

Table 9

Programme authorities	Name of the institution	Contact name	Position	E-mail
Managing authority	Ministry of Regional Development and Public Works Territorial Cooperation Management Directorate	Desislava Georgieva	Director of Territorial Cooperation Directorate	d.g.georgieva@mrrb.government.bg
Audit authority	Executive agency Audit of European Union Funds, Ministry of finance	Lyudmila Rangelova	Executive Director	aeuf@minfin.bg
National authority (for programmes with participating third or partner countries)	The Ministry of Local Self-Government of North Macedonia	Goran Milevski	Minister of Local Self-Government of North Macedonia	milevski.goran@gmail.com
Group of auditors representatives	Audit Authority of audit of instrument for pre-accession assistance, North Macedonia	Adem Curi, CSA, CFE, CA	General IPA Auditor of the Audit Authority	adem.curi@aaipa.gov.mk
Body to which the payments are to be made by the Commission	National Fund Directorate, Ministry of finance	Manuela Milosheva	Director of National Fund Directorate	natfund@minfin.bg
Body (other than managing authority) carrying out the accounting function	National Fund Directorate, Ministry of finance	Manuela Milosheva	Director of National Fund Directorate	natfund@minfin.bg

7.2. Procedure for setting up the joint secretariat

Reference: point (b) of Article 17(6)

The Joint Secretariat (JS) is a common structure that assists the Managing Authority (MA), National Authority (NA) and the Joint Monitoring Committee (JMC) in carrying their functions, provides information on the programme to the potential beneficiaries and supports the beneficiaries in implementation of projects.

In accordance with Article 17(7)(b), the MA in cooperation with NA shall set up the JS. The JS will maintain the same location in Kyustendil (Bulgaria) with a branch office located in Strumica, North Macedonia for the 2021-2027 programming period as it was the case during the 2007-2013 and 2014-2020 Bulgaria – North Macedonia, based on the following:

- the experience acquired from two consecutive programming periods will allow to start the implementation of the new Programme as soon as possible, (quick launch of calls for proposals after the Programme's approval in order to ensure a high level of absorption),

- the Kyustendil and Strumica offices are already existing administrative bodies with entirely functional management structures and with experience in programme management. This will ensure reduced operational costs such as staff training costs.

- the working procedures of the current JS were audited and can be easily updated according to the provisions of the new EU regulations and the lessons learned. The costs of the tasks of the JS will be financed from the programme's technical assistance budget. The JS will have a staff fluent in English as well as in one of the state languages of the partner countries.

The branch office in Strumica will have as a main role to serve as local contact point for project beneficiaries or potential beneficiaries.

As the staff of the JS is already trained and experienced, it will take over additional responsibilities, according to each person's expertise for the 2021-2027 INTERREG IPA Bulgaria – North Macedonia Cross-border Cooperation Programme.

7.3. Apportionment of liabilities among participating Member States and where applicable, the third or partner countries and OCTs, in the event of financial corrections imposed by the managing authority or the Commission

Reference: point (c) of Article 17(6)

According to art. 69 (2) of Regulation (EU) 2021/1060 - CPR, Partnering Countries shall ensure the legality and regularity of expenditure included in the accounts submitted to the Commission and shall take all required actions to prevent, detect and correct and report on irregularities including fraud. Each Partnering country shall be responsible for investigating irregularities committed by the beneficiaries located on its territory. Financial correction shall consist of cancelling all or part of the support from the Funds to an operation or programme where expenditure declared to the Commission is found to be irregular. Financial corrections shall be recorded in the annual accounts by the managing authority for the accounting year in which the cancellation is decided.

The managing authority shall ensure that any amount paid as a result of an irregularity is recovered from the lead or sole partner. Partners shall repay to the lead partner any amounts unduly paid. Special provisions regarding the repayment of amounts subject to an irregularity shall be included both in the contract to be signed between managing authority and the lead partner and in the partnership agreement to be signed between the beneficiaries.

If the lead partner does not succeed in securing repayment from other partners or if the managing authority does not succeed in securing repayment from the lead partner, the partnering country on whose territory the beneficiary concerned is located shall reimburse the managing authority the amount unduly paid to that partner. Where the partnering country has not reimbursed the managing authority any amounts unduly paid to a partner, those amounts shall be subject to a recovery order issued by the Commission which shall be executed, where possible, by offsetting to the respective partnering country.

The managing authority shall be responsible for reimbursing the amounts concerned to the general budget of the Union, in accordance with the apportionment of liabilities among the participating countries as laid down in this programme and as detailed in the bilateral Memorandum of Understanding/ the Memorandum of Implementation.

In accordance with article 104 of Regulation (EU) 2021/1060 – CPR, the Commission has the right of making financial corrections by reducing support from the Funds to a programme and effecting recovery from the partner States in order to exclude from Union financing expenditure which is in breach of applicable Union and national law, including in relation to deficiencies in the effective functioning of the management and control systems.

In case of any financial corrections by the Commission, the two partnering countries commit to recover the amount proportionally with the approved project budgets and performed activities by respectively beneficiaries from Bulgaria and beneficiaries from North Macedonia affected by the financial correction. In case of financial corrections by the Commission, due to random or anomalous irregularities, the two partner States commit to investigate on a case by case basis. The financial correction by the Commission shall not prejudice the partner countries' obligation to pursue recoveries under the provisions of the applicable European Regulations.

The bilateral Memorandum of Understanding/ Memorandum of Implementation between the partnering countries shall provide for detailed provisions with regard to the apportionment of liabilities and debts recovery.

8. Use of unit costs, lump sums, flat rates and financing not linked to costs

Reference: Articles 94 and 95 of Regulation (EU) 2021/1060 (CPR)

Table 10: Use of unit costs, lump sums, flat rates and financing not linked to costs

Intended use of Articles 94 and 95 CPR	Yes	No
From the adoption, the programme will make use of reimbursement of the Union contribution based on unit costs, lump sums and flat rates under the priority according to Article 94 CPR	<input type="checkbox"/>	<input checked="" type="checkbox"/>
From the adoption, the programme will make use of reimbursement of the Union contribution based on financing not linked to costs according to Article 95 CPR	<input type="checkbox"/>	<input checked="" type="checkbox"/>

A. Summary of the main elements

Priority	Fund	Specific objective	Estimated proportion of the total financial allocation within the priority to which the simplified cost option will be applied in %	Type(s) of operation covered		Indicator triggering reimbursement		Unit of measurement for the indicator triggering reimbursement	Type of simplified cost option (standard scale of unit costs, lump sums or flat rates)	Amount (in EUR) or percentage (in case of flat rates) of the simplified cost option
				Code(1)	Description	Code(2)	Description			

(1) This refers to the code for the intervention field dimension in Table 1 of Annex 1 CPR

(2) This refers to the code of a common indicator, if applicable

Appendix 1

B. Details by type of operation

C. Calculation of the standard scale of unit costs, lump sums or flat rates

1. Source of data used to calculate the standard scale of unit costs, lump sums or flat rates (who produced, collected and recorded the data, where the data is stored, cut-off dates, validation, etc):

--

2. Please specify why the proposed method and calculation based on Article 94(2) is relevant to the type of operation:

3. Please specify how the calculations were made, in particular including any assumptions made in terms of quality or quantities. Where relevant, statistical evidence and benchmarks should be used and, if requested, provided in a format that is usable by the Commission:

--

4. Please explain how you have ensured that only eligible expenditure was included in the calculation of the standard scale of unit cost, lump sum or flat rate:

5. Assessment of the audit authority or authorities of the calculation methodology and amounts and the arrangements to ensure the verification, quality, collection and storage of data:

--

Appendix 2

A. Summary of the main elements

Priority	Fund	Specific objective	The amount covered by the financing not linked to costs	Type(s) of operation covered		Conditions to be fulfilled/results to be achieved triggering reimbursement by the Commission	Indicator		Unit of measurement for the conditions to be fulfilled/results to be achieved triggering reimbursement by the Commission	Envisaged type of reimbursement method used to reimburse the beneficiary or beneficiaries
				Code(1)	Description		Code(2)	Description		

(1) This refers to the code for the intervention field dimension in Table 1 of Annex 1 to the CPR and Annex IV to the EMFAF Regulation.

(2) This refers to the code of a common indicator, if applicable.

B. Details by type of operation

The programme will support the implementation of a strategic project “Establishment of a new Border cross check point (BCCP) “Klepalo” between the Bulgaria and North Macedonia”. Its main goal is to improve regional connectivity and boost the economic growth of the CBC area.

Indicative timetable for project implementaiton:

-Launch of restricted call for proposals – I trimester of 2023;

-Evaluation – II trimester of 2023;

-Approval by the JMC – II trimester of 2023;

-Contracting – III trimester of 2023.

- Environmental and other project-related assessments and procedures under Chapter 6 “Ecological assessment and environmental impact assessment” of the Environmental Protection Act and Art. 31 of the Biodiversity Act, incl. building permits – up to 48 months upon contracting.

-Upgrade of the existing and construction of new BCCP facilities – around 36 months construction starting from the obtaining of permissions for construction in full respect with the applicable construction and environmental legislation;

-Rehabilitation of existing and construction of new roads in both countries – starting around 48 months upon contracting (only after EIA and AA are completed with positive opinion), and implemented around 36 months from the obtaining of all relevant building permits;

-Purchase of specialized technical equipment and furniture – at least 18 months; it goes in parallel with the construction works.

The transparency and visibility of the project will be ensured by providing information for the call for proposals, public consultations and a contract awarding ceremony. The construction works will start with a kick-off ceremony and will finish with a ribbon cutting event with the participation of wide range of stakeholders, including the representatives of the European Commission. Additional on-the-spot checks of officials and media will be carried out. The construction works could be captured in HQ drone videos and regularly published on social media.
